

Installation – by Certified Professionals

A key factor to providing a successful MDC, Video or LPR project is making sure it is installed properly. We have certified installation professionals that can do the complete project on-site or off-site or we can train your installation team as well. Utilizing

the same approach the military does on their equipment, RoboVu focuses on the Safety, Uptime and Ergonomics. If you would like RoboVu can provide a wire diagram after we have completed the installation to make maintenance and service that much easier.

Support – Get Up and Running Fast

The one area that seems to be over looked when evaluating a MDC, Video or LPR project is the training and support; even though, that is one of the most important pieces of the puzzle. RoboVu offers on-site training standard with any

purchase and the most responsive customer service in the market. After all it is technology, so you should have an exact process in place to keep the technology up and running – not sitting out of service.
